

## Seat for Forklifts

Forklift Seats - A strong surface to sit down is called a seat. These Seats are usually raised above floor level and nearly all seats are supported by four legs and can carry a single person. A stool is a seat that does not have a back or any arm rests. A seat that has folding action and an inclining footrest is called a recliner, while a seat along with arms only is considered an arm seat. If a seat has connected wheels, it could be known as a wheelseat and if the seat is hung from above, it is known as a swing. A permanently connected seat in a theatre or a train is known as a seat or airline seat, yet when riding; it is a saddle as in bicycle saddle. A car seat is the type used in automobiles and an infant car seat would be a seat specially designed for young children.

The design of the seat can differ somewhat considerably so as to accommodate many aesthetic tastes and requirements. As an example, designs can be decorated with drilled openings, can include low backs or gaps for ventilation or be made of porous materials. The seat back can be designed as an included headrest by way of extending the height above the occupant's head. Seats can be constructed together with an attached, built in footrest or come with a separate matching ottoman. An ottoman is a short stool that is intended to be used as a movable footrest. At times the ottoman could be connected to a glider chair with swing arms, allowing the ottoman to rock back and forth with the glider like a rocking chair along with a built-in footrest.

Seat covers are temporary cloth covers meant for a seat which can offer protection against wear and add attractiveness. A large array of seat covers from neoprene to leather are now available. More formal materials can be rented for occasions such as weddings to be able to improve the decor. Some seat covers have decorative seat ties or bows connected to be tied behind the seat in a decorative know or ribbon. Several people make use of customized clear plastic furniture covers to protect their costly sofas and seats.

Seat pads are cushions designed for seats, usually decorative; they may also be used in motor vehicles so as to add to the drivers' height. Orthopaedic backrests give support for the back, often in lumbar or lower spine area. Several producers have their seat pad designs patented and are recognized by certain medical organizations. Some of the newer car seats obtainable are equipped with built-in and adjustable lumbar supports to provide additional comfort to passengers and drivers of the vehicle.
